Farah Ben Harb

Computer Engineering Student | Cloud, DevOps, DevSecOps & SRE

Seeking a 6-month final-year internship from March 2027 in Cloud Engineering, DevOps or SRE.

benharbfarah85@gmail.com | Rouen, France | LinkedIn | GitHub | Portfolio

EDUCATION

ESIGELEC, Rouen | 2026-2027
Academic exchange in the final year of the engineering program.

ESPRIT, Tunis | 2022-2027
Computer Engineering degree, IT Architecture & Cloud Computing specialization. Expected graduation: 2027.

PROFESSIONAL EXPERIENCE

Cloud & DevOps Intern | Devoteam
Jul - Aug 2026

- Automated Azure infrastructure provisioning with Terraform.
- Built GitHub Actions delivery workflows for tests, Docker publishing and security checks.
- Deployed to K3s/Kubernetes with Helm and Argo CD; monitored services with Dynatrace.
- Built an MCP integration with Claude Desktop to query and operate infrastructure.

Software Development & Data Intern | Ooredoo
Jul - Aug 2025

- Developed Python and Java tools to process and analyze technical data and system logs.
- Automated processing workflows and built search interfaces to improve data access.

Networks & Systems Intern | Tunisie Telecom
Jun - Jul 2023

- Supported telecom network and systems environments using Linux, TCP/IP, IP addressing and routing.

SELECTED PROJECTS

Cloud-Native DevSecOps Platform
FastAPI/PostgreSQL incident service with health, readiness and metrics endpoints. Includes pytest, Docker Compose and a Jenkins pipeline configured for secrets, dependency and image scanning plus GitOps updates. Public GitHub Actions application tests pass; Jenkins execution is not publicly evidenced.

FootballMatch AI Platform | MLOps & Cloud-Native
FastAPI platform for football video detection, tracking and team classification. Uses YOLO11, ByteTrack, OpenCV, MLflow, Kubeflow, optional RAG, Docker, Helm and K3s. CI runs tests and security scans; an Azure Container Apps CPU demo is live with documented non-production limits.

Mini CRM Intelligence | MLOps & DevSecOps
Profile classification API using TF-IDF, logistic regression, FastAPI and MLflow. Docker Compose, a Terraform-managed Docker network and Ansible support local automation. GitHub Actions runs tests and security scans. No AWS deployment is evidenced in the repository.

Private Cloud Infrastructure | OpenStack & Automation
Heat templates and Ansible automation for OpenStack compute, networking, storage and Kubernetes lab environments, with Prometheus/Grafana observability assets. Repository validation covers configuration and syntax; a fresh end-to-end cloud run is not publicly evidenced.

TECHNICAL SKILLS

- Cloud & IaC: AWS, Azure, OpenStack, Terraform, Ansible
- Containers & GitOps: Docker, Kubernetes, K3s, Helm, Argo CD, GHCR
- CI/CD & security: GitHub Actions, Jenkins, Gitleaks, Semgrep, Trivy, Bandit
- Observability: Prometheus, Grafana, Dynatrace, Zabbix
- Systems & backend: Linux, Bash, Python, FastAPI, PostgreSQL, REST APIs

CERTIFICATIONS

- AWS Academy Cloud Operations (2026)
- AWS Academy Cloud Security (2026)
- Hedera HCDA, HCF & HBF (2026)
- Cisco NetAcad Network Security (2026)
- AWS Cloud Practitioner (2024)
- OCI Foundations Associate (2024)
- Multicloud Network Associate (2024)
- CCNA SRWE (2023)
